BOOT KIT

GSP has now nearly 600 boot kit references in range.

Every boot kit is equipped with every necessary accessory part and grease.

GSP boot kits will be packed in plastic bags, which has advantages for:
- logistic costs, as the parts can be ordered and stored in bulk
- customers, as they can see directly the contents of each reference

Why does GSP stick to rubber boots instead of thermoplastic boots?

GSP wants to ensure a good price-quality ratio and rubber boots are also a lot easier to install for garages, as no special tool is needed.
